

Competence in Labware

Labware range

Welcome!

VITLAB has over 100 years of tradition. The company VITRI GmbH & Co. KG was established in 1908 in Mühlthal, and the laboratory division was spun off in 1989 as VITLAB. Today, VITLAB is one of the leading manufacturers of liquid handling instruments and performance plastic laboratory products for one-time or long-term use. We develop and manufacture these laboratory products at our own production facility.

Our extensive range of products provides optimal support in your laboratory work in a wide variety of application ranges. Regardless of whether your work involves volume measurement, sampling or storage: VITLAB products will facilitate it while continuing to ensure that you achieve perfect results.

We hope that this new catalogue will serve as a valuable resource to aid in your lab work. We would be glad to respond to your enquiries, and look forward to receiving suggestions and ideas from our users.

This catalogue describes our products and provides all essential information. You will find detailed data regarding the various plastics clearly presented in the chapter entitled “General and Technical Information”. To simplify your search, our product range has been categorised into the following areas of application: dispensing, pipetting, titration, volume measurement, measuring and transferring, sample preparation, saving and storing, lab assistants.

Under “Volume Measurement”, for example, you will find a wide variety of classical volumetric instruments such as volumetric flasks, measuring cylinders, and associated accessories.

In addition to the range of products that appears in our catalogue, we also produce plastic products according to customer specification. For example, bottles and beakers required for special tasks can be commissioned with a specified geometry and thickness. Optionally, the products can be printed with an individualised scale or with customised labelling. Labware for promotional use can be designed and printed with a company name and logo. We can even accommodate requests for individualised packaging formats, materials, and designs. Further information is available in the VITLAB® Promotional chapter.

Many possibilities can be realised – don’t hesitate to ask what we can do for you!

VITLAB

Your reliable p

Certified quality

Independent inspections and routine internal audits guarantee the effectiveness of VITLAB's quality management system throughout the entire company, from development to shipment. As a result, the phrase 'Made by VITLAB' has become synonymous with quality.

Over 98% of our product line is made in Germany. Supplemental procedures such as tempering and volume testing are conducted in our own facilities, which guarantees the highest possible product quality and measurement accuracy. Our continuous improvement paradigm supports our goal of 0% failure.

The VITLAB Quality Management System has been continuously certified since January 1994, according to DIN EN ISO 9001. Active stewardship of the environment is an equally strong pillar of our business philosophy. VITLAB has been certified according to DIN EN ISO 14001 since May, 1999.

Prompt deliveries Competent customer service

The highly efficient logistics in the Großostheim production facility facilitate the shortest possible delivery times for all products listed in the catalogue. For the standard articles, we strive for an availability of over 94%.

Due to its intensive partnerships with distributors in over 70 countries, VITLAB can offer sound on-site advice, individual support, and quick answers to your questions. Our qualified product training sessions provide comprehensive technical and application-oriented information on using our products. Should problems arise, our expert repair service keeps downtime as short as possible.

VITLAB products can be ordered from specialist dealers worldwide. Our authorised sales partners can be found on the internet at:

www.vitlab.com

Or contact us directly.

For your information

Your contact Customer Service

Our Customer Service staff is at your service to provide you with competent advice and answers to all your queries and questions concerning offers, orders and deliveries. Our Product Management and Sales Team are at your disposal – also “on site” – with any technical information or assistance that you might require for your application.

VITLAB GmbH, Customer Service

Please understand that technical specifications, catalogue numbers and designs may change after this catalogue is published. The illustrations used are for representation only, and the details may vary from the description. All measurements, with the exception of exact tolerances, should be understood as approximate values. Please keep in mind that the actual testing and measuring results can be influenced by a variety of factors that are beyond our control. Therefore, you should carefully check the transferability of the data applying it to a particular application.

The packaging units (PU) correspond to the minimum order quantities. All up-to-date information is also available on the internet at www.vitlab.com.

If you need additional information, please call us.

Clear product statements

Our aim is to provide you with a clear and comprehensive presentation of all relevant product information. For quick reference, we use the following symbols:

DIN ISO-compliant Class A volumetric instruments

DE-M marking for conformity certified products according to the German Measurement and Calibration Regulation

Food-safe products according to EU Directive No. 10/2011

Products with high protection for light-sensitive substances

Products individually packaged in PE bags, labelled with the article number, description and EAN code

Products that can be autoclaved at 121 °C (2 bar) according to DIN EN 285. Note restrictions!

CE mark according to EU Guideline 2004/108/EC, 93/68/EEC; 73/23/EEC, and 93/68/EEC

CE-IVD mark according to EU Guideline 98/79/EC

Perfection in Liquid Handling

HIGHEST RELIABILITY IN DISPENSING

VITLAB 
Competence in Labware

VITLAB® Dispenser line: genius, simplex, and TA

VITLAB bottle-top dispensers are available for a broad spectrum of applications in the dispensing of exact volumes. VITLAB® genius and simplex can be used for practically any task, while VITLAB® TA dispensers have been specially developed for use in trace analysis and with highly concentrated media. As they are produced from materials with extremely high chemical resistance, VITLAB® bottle-top dispensers are very robust and reliable.

	VITLAB® genius/simplex	VITLAB® TA
Applications	Salt solutions, acids, bases, and many organic solvents	Specially for use in trace analysis for dispensing high-purity and highly concentrated acids and alkalis, as well as hydrogen peroxide, bromine and HF
Components in contact with media	Borosilicate glass, FEP, ETFE, PFA, PTFE, platinum-iridium, PVDF (screw cap)	Various fluoroplastics (e.g., ETFE, FEP, PFA, PTFE), Al ₂ O ₃ -sapphire, platinum-iridium or tantalum (depending on the model)
Operating limits	Temperature: +15 °C to +40 °C Steam pressure: max. 500 mbar Viscosity: max. 500 mm ² /s Density: max. 2.2 g/cm ³	Temperature: +15 °C to +40 °C Steam pressure: max. 600 mbar Viscosity: max. 500 mm ² /s Density: max. 3.8 g/cm ³

* Dynamic viscosity [mPas] = kinematic viscosity [mm²/s] x density [g/cm³]

General guide for dispenser selection (for the classification of dispenser media, see page 11).

Salt solutions	Acids and bases	Solvents	High-purity and highly concentrated acids and bases	Hydrofluoric acid (HF), bromine, hydrogen peroxide

			VITLAB® TA →	

Dosing

Recommended usage ranges for VITLAB® genius and VITLAB® simplex:

Medium	Medium	Medium
O Acetaldehyde	O Chloronaphthalene	I Hydrochloric acid, 37%
O Acetone	I Chromic acid	O Lactic acid
O Acetonitrile	I Chromic-sulphuric acid	I Magnesium chloride
O Acetylacetone	I Copper sulphate	I Mercury chloride
O Acrylic acid	O Cresol	O Methanol
O Acrylonitrile	O Cumene (isopropylbenzene)	O Methoxybenzene
O Adipic acid	O Cyclohexanone	O Methyl butyl ether
O Allyl alcohol	O Decane	O Methyl formate
I Aluminium chloride	O 1-Decanol	O Methyl propyl ketone
O Amino acids	O Di(ethylene glycol)	O Mineral oil (motor oil)
I Ammonium chloride	O Dibenzyl ether	O Monochloroacetic acid, 50%
I Ammonium fluoride	O Dichlorobenzene	I Nitric acid, 60%
I Ammonium hydroxide	O Dichloroethane	O Nitrobenzene
I Ammonium sulphate	O Dichloromethane	O Octane
O Amyl acetate	O Diethanolamine	O Oleic acid
O Amyl alcohol (pentanol)	O Diethyl ether	O Oxalic acid
O Amyl chloride (chloropentane)	O Diethylamine	I Perchloric acid
O Aniline	O 1,2 Diethylbenzene	O Petroleum
I Barium chloride	O Dimethyl sulphoxide (DMSO)	O Phenol
O Benzaldehyde	O Dimethylaniline	O Phenylethanol
O Benzene	O Dimethylformamide (DMF)	O Phenylhydrazine
O Benzoyl chloride	O 1,4 Dioxane	I Phosphoric acid, 85%
O Benzyl alcohol	O Diphenyl ether	I Phosphoric acid, 85% + sulphuric acid, 98%, 1:1
O Benzyl chloride	O Ethanol	O Piperidine
O Benzylamine	O Ethanolamine	O Propanol
I Boric acid	O Ethyl acetate	O Propionic acid
O Bromobenzene	O Formaldehyde	O Propylene glycol (propanediol)
O Bromonaphthalene	O Formamide	O Propylene oxide
O Butanediol	O Glacial acetic acid	O Pyridine
O 1-Butanol	O Glycerine	O Salicylaldehyde
O n-Butyl acetate	O Glycol (ethylene glycol)	O Salicylic acid
O Butyl methyl ether	O Glycolic acid, 50%	O Silver acetate
O Butylamine	O Heating oil (Diesel oil)	I Silver nitrate
O Butyric acid	O Hexane	O Sodium acetate
I Calcium carbonate	O Hexanoic acid	I Sodium chloride
I Calcium chloride	O Hexanol	I Sodium dichromate
I Calcium hydroxide	I Hydroiodic acid	I Sodium fluoride
I Calcium hypochlorite	I Iodine / potassium iodide solution	I Sodium hydroxide, 30%
O Chloroacetaldehyde	O Isoamyl alcohol	I Sodium hypochlorite
O Chloroacetic acid	O Isobutanol	I Sulphuric acid, 98%
O Chloroacetone	O Isopropanol (2-propanol)	O Tartaric acid
O Chlorobenzene	O Isopropyl ether	O Tetramethylammonium hydroxide
O Chlorobutane	O Methyl ethyl ketone	O Toluene
O Formic acid	I Potassium chloride	O Turpentine
O Gasoline	I Potassium dichromate	O Xylene
O Methyl benzoate	I Potassium hydroxide	I Zinc chloride
O Pyruvic acid	I Potassium permanganate	I Zinc sulphate
O Acetic acid	O Urea	

The above data have been carefully checked and reflect the current state of knowledge. Always follow the instructions for use that accompany the instrument as well as the reagent manufacturer's instruction manual. In addition to the chemicals listed above, solutions of a wide variety of organic or inorganic salts (e.g., biological buffers), biological detergents, and cell culture media can be dispensed. Should you require information on chemicals not listed, please do not hesitate to contact us. Last updated: 03/12.

I Inorganic media

O Organic media

VITLAB® genius & simplex

Drawing quantities of liquids from large supply bottles is a daily routine in the lab. This manual task must be carried out quickly, accurately, reproducibly, simply and safely.

VITLAB® genius and simplex bottle-top dispensers are a family of instruments with proven precision that offer many advantages in routine liquid-handling operations. VITLAB® genius and simplex can be used in practically any operation and are suitable for **organic and inorganic solutions**. The materials that come in contact with media (PTFE, PFA, FEP, borosilicate glass and platinum-iridium) are resistant to most acids, bases, and solvents.

VITLAB® genius and simplex are equipped with a positive displacement piston and a fluoroplastic (PFA) sealing lip on the cylinder wall. The latter acts like a windscreen wiper **to prevent crystal build-up on the cylinder wall** from readily crystallisable media. The glass cylinder is also coated with a plastic material that reduces the risk of splashes should breakage occur. The telescopic filling tube can be adjusted smoothly to different bottle heights.

VITLAB® genius is also equipped with our patented recirculation valve (EP 542 241) that reduces reagent loss when ventilated. The simple-to-use calibration function of the VITLAB® genius helps to meet all of the requirements of testing-apparatus monitoring, with the minimum of downtime.

VITLAB® genius and simplex are completely autoclavable at 121 °C (2 bar) according to DIN EN 285, and are DE-M marked. Also available with DAkkS calibration certificate or individual quality certificate.

Included in delivery:

VITLAB® genius or VITLAB® simplex with 3 threaded adapters made from PP. Nominal volumes of 2.5 - 10 ml (screw coupling GL 32) with adapters GL 28, S 40 and GL 45. Nominal volumes of 25 - 100 ml (screw coupling GL 45) with adapters GL 32, GL 38 and S 40. Telescopic filling tube (200 - 350 mm), mounting tool, instruction manual, and quality certificate stating all test values.

25 / 50 / 100	1	1655100

Dosing

VITLAB® TA

The VITLAB® TA dispenser is the dosing device of choice to meet the demanding purity standards required in trace analysis. The high quality parts that come exclusively in contact with the medium and the specially developed and proven cleaning process to be done before use results in **a reduced release of trace metal ions to the low ppb range, or, depending on the application, even the ppt range**. The parts that are in contact with media are made of various fluoroplastics (e.g. ETFE, FEP, PFA, PTFE), Al₂O₃-sapphire, platinum-iridium or tantalum (depending on model).

Thanks to the excellent chemical resistance of the materials used, the new dispenser can also be deployed with **highly concentrated acids and bases**, such as perchloric, sulphuric and nitric acid. Depending on the application, there is a choice of two different valve spring systems: the VITLAB® TA with tantalum spring is recommended for dosing of hydrogen peroxide (H₂O₂). For applications using sodium hydroxide (up to a max. concentration of 30%) or hydrogen fluoride (HF) the platinum-iridium spring is recommended. In order to minimize the loss of valuable reagents or sample solutions, VITLAB offers the dispenser with the optional recirculation valve. Also available with DAKkS calibration certificate or individual quality certificate.

Included in delivery:

VITLAB® TA dispenser (screw thread GL 45) with adjustable variable volumes, DE-M marked, with quality certificate, telescopic filling tube, mounting tool, GL 28/S 28 (ETFE), GL 32 (ETFE), and S 40 (PTFE) bottle adapters, and instruction manual. Optionally with or without recirculation valve.

VITLAB® piccolo

For dispensing tiny quantities of liquids in all areas of biochemical and medical research.

Even the **smallest quantities can be dispensed directly from the bottle** with the VITLAB® piccolo - a big help, particularly for serial dispensing operations. Special advantage: Disposable tips are unnecessary. This reduces costs.

The ergonomic design makes dispensing effortless and stress-free. The VITLAB® piccolo **can be operated with only one hand**. Use the thumb to depress the volume dispensing button, just as with a pipette, and a reset mechanism refills the volume automatically.

The discharge tube can be rotated over 360° so that it is always optimally situated with respect to the bottle label.

The VITLAB® bottletop dispensers piccolo 1 and piccolo 2 are used mainly in connection with aqueous and highly diluted agents. Only high-quality materials, such as PTFE, PFA, ETFE, FEP, borosilicate glass, and platinum-iridium come in contact with the media.

VITLAB® piccolo 1 with a fixed volume

VITLAB® piccolo 2 with two fixed volumes

Also available with DAkkS calibration certificate or individual quality certificate.

Included in delivery:

VITLAB® piccolo 1 or 2 with GL 28 connecting threads, mounting tool, and instruction manual.

Perfection in Liquid Handling

PRECISE AND CONVENIENT PIPETTING

VITLAB [®]
Competence in Labware

VITLAB® micropipette

The VITLAB® piston-operated pipettes are the ideal manual pipettes for demanding laboratory applications, and have all the features required by users: robust, with ergonomic shape and simple operation, completely autoclavable, highly accurate with simple calibration for long-lasting reliability.

The large, central pipetting button provides a uniform and smooth movement of the piston. For rapid replacement of the tips, the ergonomic eject button is placed easily accessible to the thumb on the front side. The VITLAB® micropipette is easy to use for both right- and left-handers. The 4-digit volume display with integrated zoom function and vertical arrangement of the numbers (top to bottom reading direction) ensures an **optimal readability of the volume** at all times. The desired volume can be set by rotating the volume-setting wheel with ease and precision. The clearly visible colour-coded frame of the volume display allows easy selection of the right pipette tip.

If necessary, e.g. for applications with non-aqueous solutions, the **integrated calibration function allows an adjustment without tools directly in the laboratory**. The corrosion-resistant piston and ejector ensure a long product life.

The micropipette is DE-M marked, CE-IVD compliant and is completely autoclavable at 121 °C (2 bar) according to DIN EN 285. Also available with DAkKS calibration certificate or individual quality certificate.

Included in delivery: VITLAB® micropipette, silicone oil resp. grease (size 5 and 10 ml), sample bag with pipette tips, quality certificate, and instruction manual.

Volume µl	A* ≤ ± %	CV* ≤ %	Tip µl	PU	Cat. No.
0.5 - 10	1.0	0.5	20	1	1641000

1000 - 10000	0.6	0.2	10000	1	1641012

* Calibrated to deliver 'Ex'. Accuracy (A) and Coefficient of variation (CV) refer to the nominal capacity (= maximum volume) indicated on the instrument, obtained with instrument and distilled water at equilibrium with ambient temperature at 20 °C, and with smooth, steady operation. The error limits are under those specified in DIN EN ISO 8655-2. DE-M marked.

Pipetting

VITLAB® micropipette -8/-12

The VITLAB® micropipettes -8 and -12 are characterized by their especially user-friendly operation while pipetting long series. They have all the features required by users: robust, completely autoclavable and highly accurate, with simple calibration for long lasting reliability, especially for established multichannel pipette applications, such as immunological assays, dilution series, or use with cell cultures in microtiter plates.

By using innovative plastic materials, the VITLAB® multichannel pipettes are **at the same time very robust and light-weight**. To ensure a long operating life, the plastic materials used are corrosion-resistant. The ergonomic finger rest coupled with the low weight contribute to comfortable handling of the pipettes. To provide an optimal and comfortable working position, the manifold can be rotated freely 360° in both directions.

The large, central pipetting button provides uniform and smooth movement of the piston. In addition, the short stroke of 12.5 mm reduces the risk of muscular disorders as a consequence of repeated stress, such as "Repetitive Strain Injury Syndrom" (RSI). The combination of the stepped design of the ejector and special rings made of FKM reduce the effort needed for ejecting the tips and thus provide comfortable operation of the pipette.

The multichannel pipettes are **especially service-friendly** for care and maintenance, as well as for calibration. If necessary, e.g. for applications with non-aqueous solutions, the integrated calibration function allows an adjustment without tools directly in the laboratory. Single shafts and seals can be easily removed, and thus can be directly cleaned or replaced.

The VITLAB® micropipette -8 and -12 are DE-M marked, CE-IVD compliant, and are completely autoclavable at 121 °C (2 bar) according to DIN EN 285. Also available with DAkkS calibration certificate or individual quality certificate.

Included in delivery: VITLAB® micropipette -8 or -12, mounting tool for nose cones, silicone grease, 8 or 12 V-rings including instructions and mounting plus demounting tool, quality certificate and instruction manual.

VITLAB® micropipette Starter-Sets

Each VITLAB® Starter Set includes 3 variable VITLAB® micropipettes with different volumes and associated, color-coded tip boxes, as well as 3 rack mounts for appropriate storage of your new VITLAB® micropipettes.

Our micropipettes are DE-M marked, CE-IVD compliant and are completely autoclavable at 121 °C (2 bar) according to DIN EN 285.

Starter Set "Mini"

Scope of delivery:

- VITLAB® micropipette 0.5 - 10 µl
- VITLAB® micropipette 10 - 100 µl
- VITLAB® micropipette 100 - 1000 µl
- Tip-Box 0.5 - 20 µl
- Tip-Box 2 - 200 µl
- Tip-Box 50 - 1000 µl
- Rack mount (3x)
- Product & application brochure

Cat. No.: 33331

Starter Set "Classic"

Scope of delivery:

- VITLAB® micropipette 2 - 20 µl
- VITLAB® micropipette 20 - 200 µl
- VITLAB® micropipette 100 - 1000 µl
- Tip-Box 2 - 200 µl (2x)
- Tip-Box 50 - 1000 µl
- Rack mount (3x)
- Product & application brochure

Cat. No.: 33332

Starter Set "Maxi"

Scope of delivery:

- VITLAB® micropipette 100 - 1000 µl
- VITLAB® micropipette 500 - 5000 µl
- VITLAB® micropipette 1000 - 10000 µl
- Tip-Box 50 - 1000 µl
- Tip-Box 0.5 - 5 ml
- Tip-Box 1 - 10 ml
- Rack mount (3x)
- Product & application brochure

Cat. No.: 33333

Pipetting

Accessories for VITLAB® micropipettes

With the practical rack mount and freely rotatable bench-top stand, VITLAB® micropipettes can be stored safely and ready to use.

Description	PU	Cat. No.
Wall mount for 1 pipette	1	1672000
Bench-top stand for 6 singlechannel or 6 multichannel instruments	1	1672002
Filter for pipette, 5 ml	25	1672010
Filter for pipette, 10 ml	25	1672012
Silicone oil for pipettes, up to 1000 µl	1	1672015
Silicone grease for pipettes 5 ml / 10 ml and multichannel pipettes	1	1672016
Fluorostatic grease for multichannel pipettes	1	1670050

Reagent reservoir, non-sterile, PP

Transparent, with lid to guard against contamination and spilling out of contents during movement. Optimally suited for working with multichannel pipettes. Autoclavable at 121 °C (2 bar) according to DIN EN 285.

High purity

Applications in molecular biology and biochemical analysis require a high level of purity in order not to adulterate results of experiments. Molecules and enzymes such as DNA, RNases and endotoxins are very stable and cannot be completely inactivated or destroyed by sterilization procedures. RNases may even fold back after denaturation. When working with microorganisms and nucleic acids a common difficulty is their ubiquitous occurrence (on hands, in saliva); therefore, for example, it is essential to wear gloves. To avoid contamination with nucleic acids, proteins and microorganisms from human contact,

the production process of our pipette tips is largely automated in a cleanroom.

ATP is a good indicator for the presence or absence of biological contamination. It is a high-energy molecule that is produced by all living cells. Because of their ability to cut DNA or RNA, contamination with DNA, DNases and RNases can, for example, manipulate biomolecular amplification techniques such as PCR. To prevent enzymatic degradation, it is of major importance, that pipette tips are free of RNases.

Packaging variations

VITLAB® pipette tips remain available in the variations palletized in the Tip-Box and packed in bags. Additionally, empty Tip-Boxes for self-filling are available. Due to the new design and functionality, Tip-Boxes up to 1000 µl are stackable and their format now conforms to the common 96 (8x12) unit format.

NEW: Resealable bags

All tips up to 1000 µl are produced under cleanroom conditions, automatically shrink-wrapped in reclosable bags and packaged in cartons. The article number, volume range and lot number of the tips are printed on every bag.

NEW: Tip-Box (up to 1000 µl)

PP box with functional hinged and snap-on lid. For all volume ranges up to 1000 µl in practical 8x12 format. Stackable and autoclavable at 121 °C according to DIN EN 285.

Tip-Box 5/10 ml

PP box with fitted lid. Filled with 5 ml (28 pcs.) or 10 ml (18 pcs.) tips. The box is autoclavable at 121 °C according to DIN EN 285.

Pipetting

VITLAB® pipette tips are made from high-quality polypropylene and are autoclavable at 121 °C (2 bar) according to DIN EN 285. The raw material used is free from additives such as DiHEMDA (di(2-hydroxyethyl) methyl dodecyl ammonium) and oleamide (9-octadecenamide) that often cause interference, particularly in biological labs. All palletized pipette tips up to 1000 µl are from now on **free of DNA (< 40 fg), RNase (< 8.6 fg), endotoxins (< 1 pg) and ATP (< 1 fg)**.

The pipette tips are **DE-M marked, CE marked according to the IVD guideline 98/79 EC** and optimally suited for VITLAB® micropipettes.

Furthermore, the tips are compatible with most pipette models from BRAND, GILSON®, Thermo Fisher Scientific FINNPIPETTE®, Eppendorf® and sartorius® Biohit®. The 5 ml tip is only tested for VITLAB, BRAND and Thermo Fisher Scientific FINNPIPETTE®. The 10 ml tip is only tested for VITLAB, BRAND, Eppendorf® and GILSON®. Note: Pipette shafts are subject to modification and should be checked before use. The fit depends on the manufacturer, pipette type, serial number, and date of manufacture, among other things.

Pipette tips, 0.5 – 20 µl

PP, non-sterile with graduation at 2 and 10 µl. Length: 46 mm. Slim tip for contact-free pipetting into microtiter plates. Tip-Box with gray mounting plate for easy identification; palletized tips are colourless.

Variation	Packaging	PU	Cat. No.

Tip-Box, empty	Box with blue mounting plate, without tips	1	155900

Pipette tips, 0.5 - 5 ml

PP, non-sterile. Length: 160 mm. Diameter: approx. 9.6 mm. Slim shape for pipetting into narrow vessels such as measuring flasks with NS 12/21.

Variation	Packaging	PU	Cat. No.
Bag, Standard	1 bag with 200 tips	200	146294
Tip-Box, filled	Box with 28 tips	1	150294

Pipette tips, 1 -10 ml

PP, non-sterile. Length: 156.5 mm. Diameter: approx. 15 mm.

Variation	Packaging	PU	Cat. No.
Bag, Standard	2 bags with 100 tips	200	146494
Tip-Box, filled	Box with 18 tips	1	150394

Perfection in Liquid Handling

RAPID AND ACCURATE TITRATION

VITLAB 
Competence in Labware

VITLAB® continuous E/RS

The VITLAB® continuous bottle-top burette (Picture 1) enables continuous titration, which leads to rapid, convenient, and accurate results. The angled display shows 4-position titration volume in large, easily read numbers (Picture 2), which simplifies operation. Turning the two hand wheels supplies the titration medium in a **continuous and pulse-free** manner via the patented double-piston pump (EP 801 982) (Picture 3). Filling procedures are not necessary. This innovative technology increases safety; its compact design and low centre of gravity reduce risk of overturning, especially with smaller bottles. The height and length of the discharge tube can be adjusted, making it possible to work safely with both short and tall bottles. The patented recirculation system (EP 542 241) (Picture 4) **prevents the loss of valuable reagent** and reduces the risk of splashes. With its simple-to-use calibration function, VITLAB® continuous fulfils the corresponding requirements for test equipment monitoring without instrument downtime. Margins of error are under those specified in the DIN EN ISO 8655-3 standard, even for partial volumes. VITLAB® continuous is DE-M marked. Also available with DAKKS calibration certificate or individual quality certificate.

Included in delivery:

VITLAB® continuous E/RS, with GL 45 connecting threads and GL 32, GL 38 and S 40 (buttress thread) size PP thread adapters, telescopic filling tube (200 - 350 mm), telescopic discharge tube (140 - 220 mm), two 1.5 V microbatteries (LR 03/AAA), instruction manual, and quality certificate.

Type	Volume/rot.** ml	A* ≤ ± %	CV* ≤ %	PU	Cat. No.
E	2.5	0.2 at 25 ml	0.1 at 25 ml	1	1620506
RS	5.0	0.2 at 50 ml	0.1 at 50 ml	1	1620507

* Error limits according to DIN EN ISO 8655-3. Accuracy (A) and Coefficient of variation (CV) refer to the nominal capacity (= maximum volume) indicated on the instrument, obtained with instrument and distilled water at equilibrium with ambient temperature at 20 °C, and with smooth, steady operation. DE-M marked.

** Volume dispensed per rotation of the hand wheel

The VITLAB® continuous E/RS bottle-top burette can be used for the following titrants up to a concentration of 1 mol/L:

Acetic acid	Potassium dichromate solution
Ammonium iron (II) sulphate solution	Potassium hydroxide
Ammonium thiocyanate solution	Potassium iodate solution
Barium chloride solution	Potassium permanganate solution
Bromide bromate solution	Potassium thiocyanate solution
Cerium (IV) sulphate solution	Silver nitrate solution
EDTA solution	Sodium arsenite solution
Hydrochloric acid	Sodium carbonate solution
Iodine solution	Sodium chloride solution
Iron (II) sulphate solution	Sodium hydroxide
Nitric acid	Sodium nitrite solution
Oxalic acid solution	Sodium thiosulphate solution
Perchloric acid	Sulphuric acid
Potassium bromate solution	Tetra-n-butylammonium hydroxide solution
Potassium bromide / bromate solution	Zinc sulphate solution

The recommendations in this table have been carefully tested and reflect the most current information available. Always follow the instruction manual for the instrument as well as the reagent manufacturer's specifications. Should you require information on chemicals not listed, please do not hesitate to contact us. As at 03/12.

VITLAB® Dr. Schilling burettes

Burettes made of borosilicate glass 3.3, tolerances according to DIN ISO 384 Class B, with high-contrast black markings. Calibrated to deliver 'Ex'. Automatic zero setting. The burette stopcock turns easily and enables fine titration. The holding device for the riser pipe serves as additional shock-proofing.

The patented VITLAB® symbiotic (DE 10 2005 034 963) offers in addition to the impact protection a thermally stable plastic coating of the glass burette tube. This provides additional breaking resistance and acts as a splinter protection.

Materials: burette of borosilicate glass 3.3, PP filling tube, PMP/PTFE burette stopcock, and PE-LD reservoir bottle.

Burette clamps, PP

Practical holder for anchoring burettes vertically on the support stand. The volume scale remains clearly readable.

Burette clamps with slip-resistant rubber-coated tips and springs made of stainless steel.

With stand clamps for securing to rods of \varnothing 8-14 mm.

Type	PU	Cat. No.
For 1 burette	5	80139
For 2 burettes	5	80140

Calibration certificates

For all volumetric instruments that are subject to test equipment monitoring, a written documentation about the regularly calibration resp. volume control is necessary. The documentation should contain the values for accuracy and coefficient of variation as well as the testing procedure and test frequency. A distinction is made between:

- Quality certificates (factory calibration report)
- Official calibration certificates (Bureau of standards, DAkkS)

Quality certificates

The VITLAB quality certificate is a factory calibration report on the basis of the quality assurance system according to DIN EN ISO 9001. Quality certificates are available as a batch or individual certificate. Devices from one production batch have the same lot number as the quality certificate. The certificate records for the specific batch the mean value, standard deviation and day of issue. In the case of an individual certificate, the volumetric instrument and the certificate bear an individual serial number in addition to the lot number. The certificate records besides the day of issue also the measured volume and the measurement uncertainty.

DAkkS calibration certificate

The DAkkS calibration certificate documents officially the traceability of measuring results to national and international standards as required by the standards DIN EN ISO 9001 and DIN EN ISO / IEC 17025 for the monitoring of measuring instruments. A major difference between factory calibration services and DAkkS laboratories is the accurate determination of the respective uncertainty of measurement guaranteed by the accredited laboratory and supervised by the DAkkS. DAkkS calibration certificates are appropriate in uses in which calibrations of an accredited laboratory are requested, where high level calibrations are demanded and for calibration of reference standards and instruments for comparative measurements.

Calibration service

VITLAB offers a repair, maintenance and calibration service (incl. DAkkS calibration) for all Liquid Handling devices made by VITLAB. The calibration laboratory accredited by the „Deutsche Akkreditierungsstelle GmbH“ (DAkkS) is authorized to issue DAkkS Calibration certificates for the following instruments: Liquid Handling products like VITLAB piston-operated pipettes and burettes, VITLAB dispensers and VITLAB volumetric plastic labware.

Competence in volume measurement

EXCELLENCE IN MEASUREMENT ACCURACY

VITLAB 
Competence in Labware

The very highest volumetric instr

Volume measurement is a routine laboratory operation. Therefore, volumetric instruments such as volumetric flasks, measuring cylinders and pipettes are standard equipment in any analytical laboratory.

The importance of the standard of measurement accuracy in your routine laboratory operations cannot be overstated. VITLAB has decades of experience in the development and production of laboratory products which are used to measure volumes. VITLAB is the first manufacturer to produce Class A measuring cylinders from PMP that are certified compliant according to DIN 12681.

All Class A PMP volumetric flasks are optionally available in transparent or UV-absorbing variations for light-sensitive substances.

t precision in uments

Calibration

Type “Ex”: The delivered quantity of liquid corresponds to the volume printed on the instrument (pipettes and burettes).

Type “In”: The contained quantity of liquid corresponds to the volume printed on the instrument (volumetric flasks and measuring cylinders).

VITLAB calibrates each individual volumetric flask “to contain” (In) at a reference temperature of 20 °C. The hydrophobic characteristics of the materials in plastic volumetric instruments lead to the measured volume being the same as the delivered quantity (“In” = “Ex”) for aqueous solutions.

Accuracy classes

Class A: The volume tolerances lie within the limits specified by DIN and ISO.

Class B: The volume tolerances are twice the error limits for Class A specified by DIN and ISO. Detailed explanations on “accuracy in volume measurement” are available in the chapter on “General and Technical Information”.

Certificate of conformity

The DE-M marking is VITLAB’s guarantee that the respective products comply with the German Measurement and Calibration Regulation. The special manufacturing process developed by VITLAB, and the proven VITLAB quality management system, ensure compliance with the volume tolerances specified by the standards.

Volumetric flasks, PFA, Class A, with screw cap, PFA

Highly transparent.

Ring mark individually calibrated to 'In'.

Class A tolerances according to DIN EN ISO 1042.

The PFA screw cap guards against contamination.

Outstanding chemical resistance, can be used with strong oxidants, highly concentrated acids and alkalis, hydrocarbons, and ketones.

With laser-engraved lot number and batch certificate. Thermal stress up to 121 °C (autoclaving) does not permanently exceed the tolerance limit.

To preserve the ring mark, do not clean at temperatures exceeding 60 °C.

Also available with DAkkS calibration certificate or individual quality certificate.

The advantages of PFA:

- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from -200 °C to +260 °C
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability, suitable for volumetric instruments
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 130.

Compare: VITLAB® volumetric flasks ...

- ... have a circular, precisely calibrated ring mark with which the meniscus can be read accurately from any position
- ... have a straight neck for precise volume measurement
- ... have a specially formed bottom for superior stability

... are MADE IN GERMANY

Volume measurement

VITLAB® opaque volumetric flasks, PMP, Class A with NS stoppers, PP

UV-absorbing, highly transparent. For storage of light-sensitive substances.

With ring mark individually calibrated to 'In'.

Class A tolerances according to DIN EN ISO 1042.

With printed lot number and batch certificate.

Thermal stress up to 121 °C (autoclaving) does not permanently exceed the tolerance limit.

To preserve markings, cleaning at no higher than 60 °C is recommended.

Also available with DAkkS calibration certificate or individual quality certificate.

Volume measurement

Graduated cylinders, PMP, Class A, tall form, red printed scale

Crystal clear. DE-M marked.

With a red printed scale and ring marks at the primary scale points, calibrated 'In'.

The lot certificate supplied bears the batch number and the actual nominal value ascertained under the test conditions. The resulting deviations from the nominal value fall well under the allowed tolerances of Class A according to DIN 12681 and ISO 6706.

With printed batch number and year of production. Also available with DAkkS calibration certificate or individual quality certificate.

Hexagonal base with bottom studs provides high stability. To preserve markings, do not clean at temperatures exceeding 60 °C. Thus, conditionally autoclavable at 121 °C (2 bar) according to DIN EN 285. For autoclaving we recommend the design with raised graduations (Cat.-No. 64604 – 65304).

Volume measurement

VITLAB pipeo®

For all pipettes from 0.1 to 200 ml.

With the VITLAB pipeo® pipette controller, pipette handling is simple and comfortable. The ergonomic handle - **very light weight** at about 190 grams - and excellent balance all contribute to ease of operation. The speed can be adjusted easily, continuously and exactly with one hand using two buttons. A 50 ml pipette can be filled comfortably in less than ten seconds. The liquid release can be done either by gravity delivery when calibrated 'Ex' (to deliver), or in blow out mode using the battery-operated motor.

Pipettes are held securely and tightly in the exchangeable adapter. Liquid vapours are purged directly to protect the instrument.

One full charge of the nickel-metal hydride battery allows 8 hours of non-stop pipetting. The charge level of the recyclable battery is shown by the LED indicator. Defective batteries are easily replaced. To avoid surprises, the LED light changes from green to red two hours before the battery must be recharged. **The VITLAB pipeo® can still be operated while the battery is being recharged.**

Included in delivery:

VITLAB pipeo®, battery charger, battery, one battery compartment cover, two replacement 0.2 µm membrane filters, instruction manual.

Type	PU	Cat. No.
pipeo® with battery charger for the European continent 230 V/50 Hz	1	1631500
pipeo® with battery charger for UK/Ireland 230 V/50 Hz	1	1631510
pipeo® with battery charger for Australia 230 V/50 Hz	1	1631520
pipeo® with battery charger for Japan 100 V/50 Hz	1	1631530
pipeo® with battery charger for USA 120 V/60 Hz	1	1631540

VITLAB maneus®

The VITLAB maneus® pipette controller enables both left- and right-handers to operate all normal bulb and graduated pipettes easily and fatigue-free. Its safe and easy handling allows even inexperienced users **to adjust the meniscus precisely**.

With the new design, unscrewing the adapter enables easy and fast replacement of the hydrophobic membrane filter, which **protects the instrument against fluid penetration**.

The valve system is optimised so that liquids can be drawn up simply, without exerting pressure. The highly sensitive filling and discharge of liquids are controlled gently by the pipetting knob. Thus, the suction element provides rapid filling of the pipette (capacity: 50 ml in less than 10 seconds). The discharge bellows are used for the emptying (blow-out) of the pipette. The specially moulded intake cone ensures secure seating for all normal bulb and graduated pipettes (0.1 to 200 ml).

The VITLAB maneus® is simple to dismantle, easy to clean, and completely autoclavable at 121 °C (2 bar) according to DIN EN 285.

For all normal bulb and graduated pipettes from 0.1 to 200 ml. With replacement 3 µm membrane filter and instruction manual.

Type	PU	Cat. No.
maneus®	1	1630500

Accessories for VITLAB pipeo® & maneus®

Volume measurement

Pipette fillers, NR

Classic accessory for pipetting with volumetric or measuring pipettes. With 3 valves.
Valve A: Air release, Valve B: Liquid filling, Valve E: Liquid dispensing.

Type	PU	Cat. No.
Universal model, for pipettes up to 10 ml	1	104099
Universal model, for pipettes up to 100 ml	1	104199

Pipette fillers

For pipetting liquids, fit all glass and plastic pipettes. Slow rotation of the actuator-wheels draws liquid into the pipette. Pressing the air bleed valve automatically empties the pipette without returning the piston.

For pipettes ml	Colour	PU	Cat. No.
2	Blue	1	324594
10	Green	1	324694
25	Red	1	324794

Pipette stand, PP

Upper portion with 94 bore holes of different diameters for secure placement of volumetric and measuring pipettes of any size.

The stable base has a rotatable, ribbed base plate in which the pipette tips can be gently seated.

The racks are supplied unassembled, and can easily be assembled according to the accompanying assembly instructions.

Ø mm	Height mm	PU	Cat. No.
230	470	2	79194

Pipette tray, PVC

Holds pipettes from 120 mm length.

Pipettes can easily be placed in and taken out from the troughs in the tray, even with gloves.

L x W x H mm	PU	Cat. No.
283 x 216 x 40	1	80996

Pipette tray, PVC

Suitable for drawers, divided lengthwise into 4 compartments.

L x W x H mm	PU	Cat. No.
420 x 300 x 30	1	80252

Volume measurement

Pipette washer, PE-HD

For simple and basic cleaning of pipettes. With discharge siphon for an automatic water exchange.

The complete washing system includes the pipette washer, pipette jar (for pre-cleaning) and pipette basket (for dipping pipettes into the pipette washer or pipette jar). Pipette jars and pipette baskets need to be ordered separately.

Suitable for the use with pipette baskets (cat. nos. 80219 and 80222).

MEASURING AND TRANSFERRING

VITLAB 
Competence in Labware

Graduated beakers, PP, raised blue scale

Highly transparent. With easily readable, raised, embossed blue scale, and stable, easy-grip handle. To preserve markings, do not clean at temperatures exceeding 60 °C. Conditionally autoclavable at 121 °C (2 bar) according to DIN EN 285. For autoclaving, we recommend the design with raised graduations (cat. nos. 440941 - 447941).

Measuring and transferring

Graduated beakers, stackable, PP

Highly transparent. With stable handle and easily readable, printed black scale on both sides. Therefore, the volume is equally visible for left- and right handers.

To preserve markings, cleaning at no higher than 60 °C is recommended. For autoclaving we recommend the design with raised graduations (cat. nos. 440941 - 447941).

Volume ml	Divisions ml	Height mm	Ø mm	PU	Cat. No.

Competence in Plastic Labware

SAMPLE PREPARATION

VITLAB 
Competence in Labware

VITsafe™ - the Safety Wash Bottle

Working with chemical substances, which are sometimes dangerous, requires a high level of responsibility and concentration. With the VITsafe™ safety wash bottles VITLAB offers laboratory equipment that provides safety in the highest degree.

VENT-CAP virtually prevents leakage

Temperature changes **(1)** in a laboratory can often cause conventional wash bottles to leak or drip due to the resulting increase in internal pressure **(2)**. The patent-registered, metal-free VENT-CAP screw closure of the VITsafe™ safety wash bottle virtually prevents this. The expansion of the gas due to the rise in pressure can escape through an integrated capillary **(3)**, thus dissipating the static over pressure. In addition, the lack of a spray insert allows turbulences to be almost completely avoided. The smooth and finely drawn tip of the spray bottle allows a precise spray jet and optimizes the fluid backflow. Dripping is subsequently almost entirely prevented.

Clear identification due to safety imprint

The permanent imprint according to directive (EC) No. 1272/2008 **(GHS)** offers even more safety.

It contains all essential information:

- Substance name in German, English, French and Spanish
- Chemical formula and CAS number
- Hazard pictogram with signal word
- Hazard (H) and precautionary (P) statements
- as well as the U.S.-based NFPA diamond

The VITsafe™ safety wash bottles are available as narrow-mouth or wide-mouth type. The particularly large opening of the wide-mouth bottles allows filling even without a funnel. Select the safety wash bottles to fit your applications from among **17 different substance names** and three volumes (250/500/1000 ml).

Sample preparation

VITsafe™ safety wash bottles, narrow-mouth

Bottles from PE-LD or PP, spray tube from PP.

More safety due to the durable safety imprint in accordance to Directive (EC) No. 1272/2008 (GHS), as well as with all important information:

- Material name in German, English, French and Spanish
- Chemical formula, CAS No., hazard pictogram, signal word
- Risk phrases (H phrases), safety phrases (P phrases), as well as NFPA Code

Precise spray jet and optimised medium backflow through the continuous and finely drawn tip of the spray tube. Practically no leakage or dripping with the bright red VENT-CAP screw cap, the design of which prevents almost all static overpressure.

Wash bottles with imprint can be found on page 69.

Wash-bottles, coloured, PE-LD/PP

Narrow-mouth bottles, made from PE-LD. Available in four different colours to facilitate ready identification. Screw cap and spray tube from PP.

Precise spray jet and optimised medium backflow through the continuous and finely drawn tip of the spray tube.

Pasteur pipettes, PE-LD

Disposable. Very good reproducibility of the number of drops per milliliter, thus ideal for distributing aliquots of liquid portions. Pasteur pipettes can be deep-frozen when filled, or if needed, be converted into sealed vessels through heat-sealing. The integrated suction bulb can readily be compressed. Thus, finger fatigue from frequent pipetting is avoided. Can be sterilised with gas or gamma radiation.

Sample preparation

Spray bottles, PP

White or transparent bottles made from PP.

Sprayer insert with stable, smoothly operated pump trigger and adjustable spray nozzle, which can be regulated from the finest mist (nebulising) to a precise liquid jet.

Range: approx. 3-4 meters.

Ideal for spraying detergents or disinfectants, especially into difficultly accessible areas, as well as applications in thin layer chromatography.

Volume ml	Colour	PU	Cat. No.

Griffin beakers, PFA

Transparent. With a raised scale. Excellent chemical resistance and very high thermal stability from -200 to +260 °C.

Autoclavable at 121 °C (2 bar) according to DIN EN 285.

The advantages of PFA:

- Especially suitable for use in trace analysis
- Ideal for sensitive and valuable samples
- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from -200 °C to +260 °C
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 130.

Water-jet pump, PP

For generation of a vacuum and to siphon off liquids and vapours (if necessary, with a suction main or condensation trap connected upstream).

Pump fluid: Water

Length of the unit: approx. 210 mm (R 3/4" connector fitted)

Weight: approx. 33 g (R 3/4" connector fitted)

- High chemical resistance, since the pumped media only come into contact with polypropylene, FKM and PTFE.
- Operating temperature up to a maximum of 80 °C.
- Integrated non-return valve increases operating safety.
- Simple operation, and easy to clean.
- Detachable vacuum connection.
- Variety of supplied adapters simplify connections to most water sources, and additional reducing adapters are available.

Very low water consumption:

The flow configuration has been optimised, resulting in a 33% reduction of water consumption (190 liters/h at 3.5 bar water supply pressure).

Constant discharge pressure:

The discharge pressure of 16 mbar (water temperature: 12 °C) is reachable across a wide range of water supply pressures of from 3 to 6 bar.

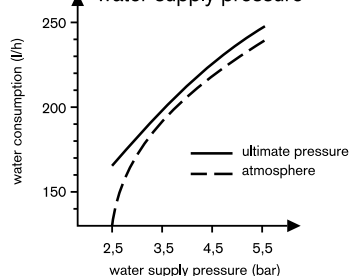

High suction capacity:

The suction capacity is approx. 400 L/hour of air (vs. atmospheric pressure, 12 °C water temperature, 3.5 bar water supply pressure).

Included in delivery:

Water jet pump, including: water supply connection (lock nut R 3/4", reducing adapter R 1/2" and hose connection (olive) with outer Ø 10-12 mm), vacuum connection (olive with outer Ø 6-9 mm, detachable with GL 14 screw cap).

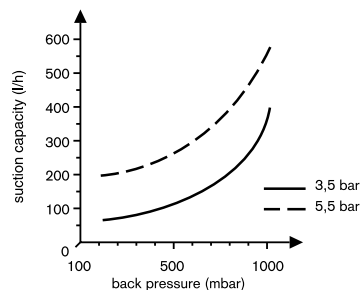

Water consumption as function of water supply pressure

Ultimate pressure as function of water temperature

Pumping capacity as function of back pressure

Description	PU	Cat. No.
Water-jet pump	1	77094
Accessories:		
Reducing adapter R3/4 inch to R3/8 inch	1	159665
Reducing adapter R3/4 inch to M 22x1, Perlator thread	1	159670

Sample preparation – material separation

Filtering racks

Funnel holder with base and adjustable height, made from PP, support stand made from aluminium, diameter: 12.7 mm; and, length: 595 mm. To hold from two to four funnels with an upper outer diameter of 50-120 mm.

Positions	Base plate mm	PU	Cat. No.
2	250 x 140	1	78394
4	450 x 140	1	78294

Support for separatory funnels, PP

For separatory funnels of from 125-500 ml. With practical clamps for simple attachment to stand rods with diameters of 8-14 mm.

Positions	PU	Cat. No.
1	5	80970

Imhoff or sedimentation cone, SAN

According to DIN 12 672. Crystal clear, with raised scale for precise reading of volumes. For simple, basic cleaning and rinsing, the screw coupling on the tip can be removed. Lower breakage risk than for PC or glass containers. For determination of suspended matter in liquids (e.g., for industrial and municipal wastewater).

Graduation:	Divisions:	Error limits:
0 - 2 ml	0.1 ml	+/- 0.1 ml
2 - 10 ml	0.5 ml	+/- 0.5 ml
10 - 40 ml	1 ml	+/- 1 ml
40 - 100 ml	2 ml	+/- 2 ml
100 - 1000 ml	50 ml	+/- 10 ml

Volume ml	PU	Cat. No.
1000	3	75991

Sedimentation rack, PMMA

Holds two Imhoff sedimentation cones. Base plate with depression for exact vertical positioning of the sedimentation cone.

L x W x H mm	PU	Cat. No.
150 x 300 x 290	1	81056

Evaporating dishes, PFA

With snap-on lid, PE. For contamination free sample preparation and efficient transportation. Due to a conical depression in the middle of the base very small amounts of a solvent are adequate to absorb the evaporated samples.

Volume ml	Height mm	Ø mm	PU	Cat. No.
25	25	50	1	103297
50	54	50	1	103397

Sample preparation – material separation

Round-bottom flasks, PFA

Transparent, neck with NS 29/32. Suitable as safety flask for use with rotary evaporators (operation at room temperature) to collect the distilled off liquid. High thermal stability and chemical resistance.

The advantages of PFA:

- Especially suitable for use in trace analysis
- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from -200 °C to +260 °C, autoclavable.
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 130.

Volume ml	Height mm	Ø mm	PU	Cat. No.
100	117	65	1	107797
250	147	88	1	107897
500	177	107	1	107997

Round-bottom flask stand, PP

White, for flasks with a round bottom. Excellent chemical resistance. Autoclavable at 121 °C (2 bar) according to DIN EN 285.

Ø mm	PU	Cat. No.
160	5	80271

Gas wash bottles, PFA

Cap with S 40 buttress threads, and frit made of PTFE. A pore size of approx. 50 μm for optimal optimal pearling of the gas into the liquid. A wide field of application is possible due to the use of high-quality fluoroplastic. Suitable only for non-pressurised operation.

The advantages of PFA:

- Especially suitable for use in trace analysis
- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from $-200\text{ }^{\circ}\text{C}$ to $+260\text{ }^{\circ}\text{C}$, autoclavable
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 130.

273	230	311	1	326294

Desiccators with stopcock, PP/PC

With a bleed valve and an O-ring seal between the dome and the lower portion. The desiccators are suitable for vacuum and are provided with a non-return valve. Hot crucibles should only be placed on a porcelain plate, and should not come into too close contact with the rim of the desiccator. The insert made of PP serves to hold the drying agent. Desiccator plates should be purchased separately.

Sample preparation – material separation

Sample containers, PFA

With screw cap made of PFA. Cylindrical, tall shape.
Ideal for sample collection, transport and storage of samples.

The advantages of PFA:

- Especially suitable for use in trace analysis
- Ideal for sensitive and valuable samples
- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive, smooth surfaces
- High thermal stability from -200 °C to +260 °C, autoclavable at 121 °C (2 bar) according to DIN EN 285
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw material

Further information on PFA can be found starting on page 130.

Sample tubes, PFA

Sample tubes made from PFA for sample preparation, centrifugation and for use in autosampler racks. With or without individually calibrated ring mark at 10 ml with GL 25 screw cap made from PFA or PE stopper (see Table).

The advantages of PFA:

- Especially suitable for use in trace analysis
- No memory effects
- Practically no carryover due to the extremely hydrophobic, anti-adhesive, smooth surfaces
- High thermal stability, from -200 °C to +260 °C, autoclavable
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean

Further information on PFA can be found starting on page 130.

Sample vials, PFA

Sample vials made of PFA with conical interior and raised graduation (5 ml subdivisions). Available in two different types, depending on application:

- Cored outside bottom
- Flat surface on bottom of vial for improved heat transfer (Recommended for use with hot plates)

Both 50 ml sizes fit in common Autosampler racks.

Scope of delivery is without screw cap. Please order the screw cap (Cat. No. 104997) separately.

Autosampler-vials, PFA

Raised graduation with 1 ml subdivisions.

Translucent material for optimum visibility of the liquid contained in the vial.

Conical interior for use with autosamplers. The outer design allows easy handling of the autosampler-vials with forceps. Optionally available with snap cap for long term storage or lid with knob for fast opening and closing (dust protection) of the vial.

Scope of delivery is without lid or cap. Please order the fitting lid (Cat. No. 105597 resp. 105697) separately.

500	S 28	190	76	1	108397
1000	S 28	240	96	1	108497

The advantages of PFA:

- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive, smooth surfaces
- High thermal stability, from -200 °C to +260 °C, autoclavable
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 130.

Wide-mouth bottles, PFA

Transparent.

With screw cap made of PFA with buttress threads. Ideal for long-term storage of high-purity oxidants, acids, alkalis, as well as hydrocarbons, trace analysis solvents and standards.

Saving and storing

PFA-economy narrow-mouth bottles

Narrow-mouth, "PFA-economy" quality wash bottles. Transparent.
With recycled PFA content. Thus, reasonably priced and environmentally friendly.
PFA-economy bottles have excellent chemical resistance and high thermal stability from -200 °C to +260 °C and can be used for less critical applications for which pure PFA is not necessary.
With screw cap made of ETFE.

Volume ml	Thread GL	Height mm	Ø mm	PU	Cat. No.

1000	32	233	96	1	108492

Screw caps, PFA

Transparent. For sealing all PFA containers with GL threads or buttress threads.
Autoclavable at 121 °C (2 bar) according to DIN EN 285.

The advantages of PFA:

- Especially suitable for use in trace analysis
- Ideal for sensitive and valuable samples
- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from -200 °C to +260 °C, autoclavable
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Highly pure starting materials used

Further information on PFA can be found starting on page 130.

VITLAB[®] Promotional

ADVERTISE WITH YOUR GOOD NAME

VITLAB 
Competence in Labware

Your good name in daily use

Precision is usually of great significance when it comes to ensuring the effective use of granulates, powders or liquids. The transportation, storage and decanting of small volumes often require special containers. VITLAB is one of the leading manufacturers of high-grade plastic labware and specializes in high-precision printing on plastic products with superior chemical and break resistance.

This offers a great advantage: by having your name and logo printed on these products, you will work “hand in hand” with your clients and always maintain a high presence. The products can be used wherever people work with granulates, powders or liquids; for example, in agriculture, laboratories, the medical sector, the food industry and the cleaning

business, as well as when using colours and chemicals.

Plastic labware by VITLAB guarantees that you have the best manufacturing quality and optimal functionality associated with your good name, thus ensuring a sustained positive echo.

A positive echo through individuality

VITLAB develops and manufactures its products at its own production facilities. This allows us to produce and print plastic labware according to your individual requirements and specifications. Please do not hesitate to inform us of your wishes and we will let you know what sort of individual solution we can provide for you.

When it comes to precision and accuracy

Volumetric containers by VITLAB stand out due to the greater precision and accuracy ensured by the measuring scale. On request, VITLAB can also print a customized scale on your product. The quality colours guarantee that the scale remains readable and does not wear off.

Small gifts keep the friendship alive

Plastic products have a high level of usability and are ideally suited as advertising articles or for promotional campaigns for your products. You can have your company name and logo or other motifs printed on them permanently and thus advertise with your good name.

A unique position thanks to an unmistakable design

VITLAB provides advertising materials of the very highest quality with round, conical or flat printing, using screen or pad printing systems and with particularly durable and luminescent colours according to the Pantone and HKS colour table. Various marking techniques, such as laser printing and heat embossing, provide you with an unmistakable design.

Would you like to have more information?

Please do not hesitate to contact us!

Please do not hesitate to contact us for advice on the selection, design and colour of your plastic products. A personal consultant ensures that you receive competent advice from the first meeting to the delivery of the product.

Fluoroplastic PFA

Today, trace analysis operates with concentrations in the range of ng/g (ppb) and pg/g (ppt). Thus, all modern processes require a corresponding trace analytical laboratory hygiene. However, the analytical accuracy of the measurement depends not only on the accuracy of the analytical instrument, but also directly on the judicious selection of container materials and the preparation of the samples themselves. Under these conditions, the fluoroplastic PFA truly shows its worth.

Labware made from polyolefins, such as polypropylene (PP) or polyethylene (PE), has found broad application in modern laboratories. Since catalysts (e.g., Ziegler-Natta or Philipps) are used during the manufacturing process, the constituent elements (frequently Al, Cr, Mg, Si, Ti or Zn) can still be detected in the ultra-trace range, and thus might affect the analysis results. In direct comparison to these manufacturing processes, PFA is especially suitable for trace element analysis because it is manufactured without the use of additives, and therefore cannot become contaminated by the additive components.

In addition to this advantage, PFA has other remarkable properties. PFA can be used for a broad range of applications by virtue of its resistance to almost all organic and inorganic compounds. PFA is one of the most resistant materials after platinum, and is practically chemically inert. Moreover, PFA stands apart with extraordinarily high thermal stability, making it possible to operate in the temperature range of -200 to +260 °C.

For all PFA products, VITLAB uses only high-purity PFA, which is particularly well-suited for trace analysis. For less critical uses, e.g. if the main requirement is a high chemical resistance, VITLAB offers bottles of "economy grade" PFA, which are partly made of recycled PFA. These are favourably priced and also environmentally friendly.

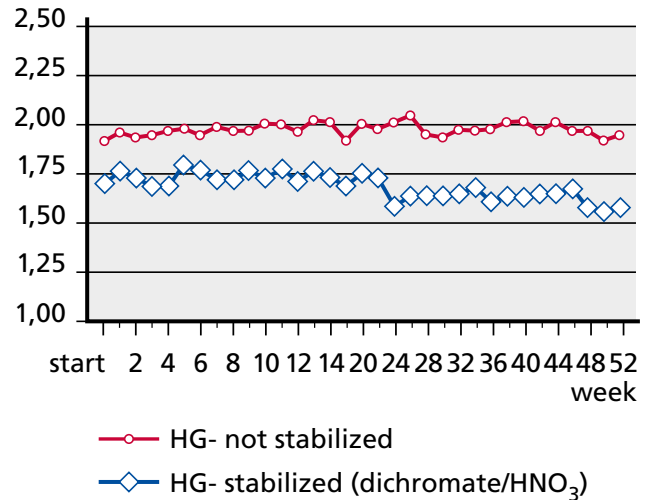

Pictures of the surface structure of PTFE, PFA, and PE-HD with a scanning electron microscope (8000 times magnification).

Technical information

VITLAB's PFA vessels have unique, extremely smooth, liquid-repellent surfaces that are made possible through modern manufacturing processes and acknowledged expertise (see pictures on "Surface Structure"). This is especially significant in the illustrative comparison. The pictures taken in a scanning electron microscope show uneven and irregular surfaces for PE-HD and PTFE, and deep pores and concavities can be identified in the PTFE surface. In contrast to the uneven surfaces, PFA evaporating dishes had to be marked (X) and exhibit a completely smooth, even and uniform surface structure.

Due to this characteristic, all PFA labware is particularly easy to clean and presents hardly any interactions with samples as compared to conventional container materials. With these advantages combined with the minimal water absorption by PFA (< 0.03%), even samples at very low concentration can be stored for long periods of time in PFA containers without changes in their concentration (see the application example on Mercury Standards).

Concentration 2 ppb (ng/g) each

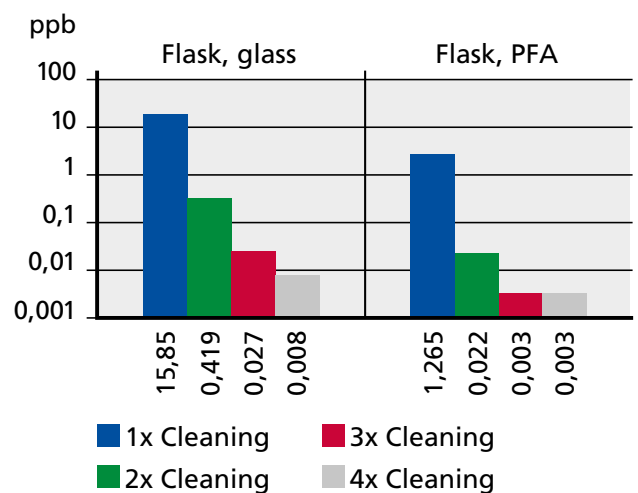

Application Example - Mercury Standards: Storage of an Hg standard in high-purity PFA containers (concentration 2 ppb (ng/g) each). Source: GIT Laboratory Trade Magazine 1/95

Cleaning after contamination

The valuable properties of PFA, primarily the near absence of memory effects, ensure the reliability of trace analytical results. In comparison with a commercially available glass flask, the simple cleaning after contamination with lead (Pb) solution at a concentration of 1000 ppb (ng/g) is a telling example (see the section on Cleaning of Volumetric Flasks). The cleaning of the glass and PFA volumetric flasks was conducted by shaking with 65% HNO₃ *Suprapur® (Pb < 0.005 ppm) at room temperature. With PFA volumetric flasks, the minimum concentration of 0.003 ppb is reached after three rinses, while substantially higher lead concentrations can be measured in glass flasks even after four rinses. The experiment also shows that PFA labware does not require the usual time-consuming boiling.

VITLAB® opaque

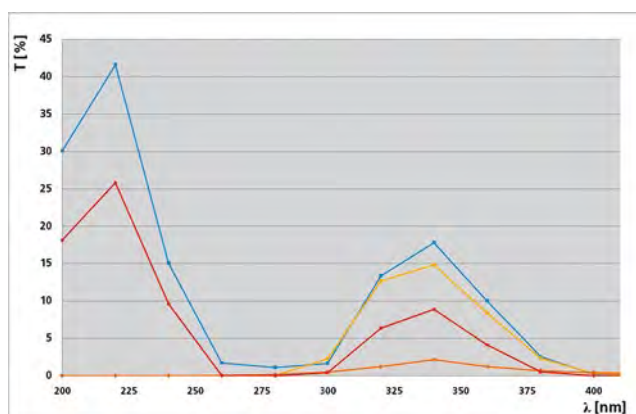

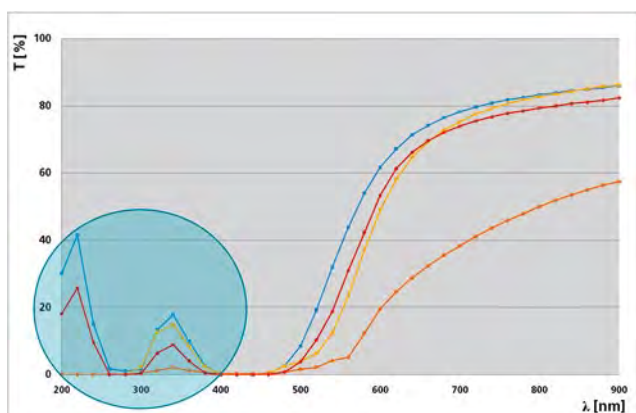

Greater protection for light-sensitive substances.

Light-sensitive substances require protection from the effects of light and particularly UV light so that they have a longer usable lifetime. In 2008, VITLAB manufactured the world's first opaque volumetric flasks developed from specially pigmented plastic. The special pigments safely protect samples from the effects of light, while still maintaining high transparency to enable volumes to be set accurately.

The opaque volumetric flasks and reagent bottles safeguard the contained substances with a light protection factor of virtually 20. The absorption spectrum properties exhibited by the products are significantly better over the entire spectral range of 200 - 900 nm versus comparable brown glass products. VITLAB® opaque reagent bottles are especially effective below 560 nm. They have a maximum of 5% transmission at 560 nm, and less than 2.5% transmission measurable at or below 520 nm. The pigments in the opaque products exhibit a brilliant characteristic shine in the UV range starting at 400 nm.

In the UV range from 280 nm and in the upper visible range from 580 nm, VITLAB® opaque reagent bottles and volumetric flasks are thus significantly better than even high-quality brown glass containers. The differences between reagent bottles made of VITLAB® opaque and those of brown glass bottles can be more or less pronounced depending on the type of the glass, since the brown glass bottles are subjected to significantly greater production fluctuations.

The higher break resistance and lower weight are advantageous during daily use in the laboratory, and make VITLAB® opaque an attractive alternative to conventional volumetric flasks and reagent bottles made of brown glass.

Light transmission diagram: Comparison of results for the measurement of transmission (T%) between VITLAB® opaque and brown glass in volumetric flasks and bottles, in the wavelength range of $\lambda = 200$ to 900 nm. VITLAB® opaque provides better protection of the container contents from the effects of light, particularly in the UV range (see diagram below).

Classification and type description of plastics

In general, plastics can be divided into the three groups. The abbreviations of the described plastics used are those according to DIN 7728.

Thermoplastics

Plastics with a linear molecular structure, with or without side chains, can be reversibly moulded through heat treatment without changing their thermoplastic properties. Thermoplastics are frequently used in the production of plastic labware. Hence we provide here a brief description of some of the more important plastics, and explain their molecular structure, as well as their mechanical, chemical and physical properties. The most frequently used thermoplastics are polyolefins, such as polyethylene and polypropylene.

PFA (perfluoroalkoxy copolymer)

- 121°C
- Highly transparent, elastic thermoplastic with high-molecular, semi-crystalline structure
- Very good temperature stability
- Broad range of application, from -200 °C to +260 °C
- Virtually chemically inert, excellent chemical stability against practically all chemicals
- Very low water absorption (< 0.03%)
- Ultra-smooth, anti-adhesive surface with unique surface structure
- Typical products are, for example: Class A volumetric flasks, bottles, sample containers
 - ➔ Especially suitable for use in trace analysis, and for the storage of low-concentration solutions

PTFE Polytetrafluoroethylene

- 121°C
- Non-transparent, white, elastic thermoplastic with high-molecular, semi-crystalline structure
- Very good temperature stability
- Broad range of application, from -200 °C to +260 °C
- Virtually chemically inert, excellent chemical stability against practically all chemicals
- Anti-adhesive surface
- Very good sliding properties and electrical insulating capability (very low friction coefficient)
- Typical products are, for example: Bottles, beakers, sheathing for magnetic stir bars

FEP Tetrafluoroethylene-perfluoropropylene copolymer

- 121°C
- Translucent, white, thermoplastic copolymer with high-molecular, semi-crystalline structure
- Anti-adhesive surface
- Very good temperature stability
- Broad range of application, from -100 °C to +205 °C
- Excellent chemical stability

ETFE Ethylene-tetrafluoroethylene copolymer

- 121°C
- Translucent, white copolymer from ethylene and tetrafluoroethylene
- Very good temperature stability
- Broad range of application, from -100 °C to +150 °C
- Very good chemical stability
- Typical products are, for example: Thread adapters, Griffin beakers, threaded connectors

PMP Polymethylpentene

- 121°C
- Crystal-clear, stiff thermoplastic
- Similar structure to PP, with the methyl group replaced by an isobutyl group
- Good thermal stability
- Range of application from 0 to +150 °C
- Good tensile strength and dimensional stability
- Good chemical stability
- Typical products are, for example: Class A volumetric flasks, Class A measuring cylinders
 - ➔ For the storage of light-sensitive substances, also available in highly transparent, UV-absorbing VITLAB® opaque

Classification and type description of plastics

PP Polypropylene

121°C

- Highly transparent, elastic thermoplastic
- Similar structure to PE, with a methyl group attached to alternate carbon atoms in an isotactic arrangement
- Good thermal stability
- Range of application from 0 °C to +125 °C
- Good tensile strength and dimensional stability
- Good chemical stability, comparable to PE
- Typical products are, for example: Class B volumetric flasks, Class B measuring cylinders, measuring pitchers, sample containers, funnels
 - ➔ For the storage of light-sensitive substances, also available in highly transparent, UV-absorbing VITLAB® opaque

PE-HD High-density polyethylene

- Transparent, elastic thermoplastic
- Good thermal stability
- Range of application from -50 °C to +105 °C
- Compact, with increased tensile strength due to less cross-linking compared with PE-LD
- Good chemical stability
- Better chemical stability to organic solvents compared to PE-LD
- Typical products are, for example: Bottles, buckets, scoops
 - ➔ For the storage of light-sensitive materials, also available in brown-dyed version

PE-LD Low-density polyethylene

- Highly transparent, elastic thermoplastic
- Moderate thermal stability
- Range of application from -50 °C to +80 °C
- Very good flexibility
- Good chemical stability
- Typical products are, for example: Wash bottles, dropping pipettes

PC Polycarbonate

121°C

- Transparent, stiff thermoplastic
- Linear polymer of carbon dioxide
- Very good temperature stability
- Broad range of application, from -130 °C to +125 °C
- Good tensile strength and impact resistance
- Moderate chemical stability
- Typical products are, for example: Desiccators
- Note: Polycarbonates can lose their tensile strength through autoclaving or exposure to alkaline detergents

POM Polyoxymethylene

121°C

- Non-transparent, white, stiff, and high-molecular thermoplastic
- Good thermal stability
- Broad range of application, from -40 °C to +130 °C
- High hardness and dimensional stability
- Good sliding properties and abrasion resistance
- Good chemical resistance to aliphatic, aromatic, and halogenated hydrocarbons, and alkalis. Unstable to acids and esters
- Typical products are, for example: Slide boxes, staining jars
 - ➔ Especially good chemical stability to organic solvents
 - ➔ POM can replace metal in many applications

Classification and type description of plastics

PA Polyamide

- Linear polymers with regularly repeating amide bonds along the main chain
- Good thermal stability
- Range of application from -40 °C to +100 °C
- Outstanding durability and tensile strength, often used as construction material and for metal coatings
- Good chemical resistance to organic solvents
- Readily attacked by acids and oxidising agents
- Typical products are, for example: Spatula

SAN Styrene-acrylonitrile copolymer

- Crystal clear, stiff thermoplastic copolymer
- Moderate thermal stability
- Range of application from -40 °C to +70 °C
- Brittle and dimensionally stable
- Low tendency to form stress cracks
- Moderate chemical stability, SAN is slightly more chemically stable than PS
- Typical products are, for example: Graduated beakers, Class B graduated cylinders

PMMA Poly(methyl methacrylate)

- Crystal clear ("organic glass"), dimensionally stable thermoplastic
- Moderate thermal stability
- Range of application from -50 °C to +65 °C
- Very good UV radiation stability
- Poor chemical stability
- Typical products are, for example: Cuvettes

PS Polystyrene

- Crystal clear, stiff, amorphous or semi-crystalline thermoplastic
- Moderate thermal stability
- Range of application from -20 °C to +70 °C
- Hard, brittle, and dimensionally stable
- Tendency to form stress cracks
- Moderate chemical stability
- Typical products are, for example: Containers, cuvettes

PVC Poly(vinyl chloride)

- Amorphous thermoplastic, transparent with a slight blue tint
- Moderate thermal stability
- Range of application from -20 °C to +80 °C
- Good chemical stability, especially resistant to oils
- The addition of plasticisers opens up many useful applications, ranging from artificial leather to injection moulding components
- Typical products are, for example: Drawer organisers, dishes, trays

Classification and type description of plastics

Thermosets

Plastics with densely cross-linked molecules, which are very hard and brittle at normal temperatures. Heating causes irreversible hardening. These plastics are rarely used for plastic labware. The best known thermosets are the melamine resins. Melamine resin is produced by polycondensation of melamine with formaldehyde.

MF Melamine-formaldehyde resin

- Colourless thermoset, also belongs to the aminoplast group
- Good thermal stability
- Broad range of application, from -80 °C to +120 °C
- High surface hardness, abrasion resistance, and fire resistance
- Good electrical insulator, high creep resistance
- Good chemical stability
- Typical products are, for example: Trays, plates, mixing bowls
- Caution necessary when used in a microwave oven: Heating can release amounts of melamine and formaldehyde that can be harmful to health!

Elastomers

Plastics with loosely cross-linked molecules that exhibit rubber-like elasticity at room temperature. Heating causes irreversible integration (vulcanisation). The best known elastomers are natural rubber and silicone rubber.

NR Natural rubber

- Elastomer obtained from latex (milk-like sap from rubber tree bark) and vulcanised with sulphur to improve the elasticity
- Composed of polymerised isoprene, with an extremely uniform structure
- Moderate thermal stability, not stable to UV
- Range of application from -40 °C to +80°C
- High tensile strength and elongation at rupture
- Poor chemical stability
- Typical products are, for example: pipette filler bulbs

SI Silicone rubber

- Synthetic elastomer in which silicon atoms are linked together by oxygen atoms
- Includes polyorganosilanes that have groups such as hydrogen atoms, hydroxyl groups or vinyl groups for cross-linking reactions
- Very good thermal stability, and resistance to UV, ozone, and weather
- Broad range of application, from -60 °C to +180 °C
- High dimensional stability, even at high temperatures
- Very good durability, even at low temperatures
- Poor chemical stability

EPDM Ethylene-propylene-diene rubber

- Synthetic terpolymeric elastomer
- Manufactured with metallocene or Ziegler-Natta catalysts that utilise vanadium compounds and aluminium alkyl chlorides
- Good thermal stability
- Range of application from -40 °C to +130 °C
- High elasticity, even at low temperatures
- Stable to UV and ozone, and weather-resistant
- Very good chemical stability

Technical information

Chemical resistance of plastics

With regard to chemical stability, plastics are classified as follows:

<p style="font-size: 2em; font-weight: bold;">+</p> <p>Very good chemical resistance</p> <p>Within 30 days, continuous exposure to media causes no damage to the plastic. The plastic may remain resistant for years.</p>	<p style="font-size: 2em; font-weight: bold;">0</p> <p>Good to limited chemical resistance</p> <p>Within 7-30 days, continuous exposure to media causes minor damage (e.g. swelling, softening, loss of mechanical strength, discolouration), some of which is reversible.</p>	<p style="font-size: 2em; font-weight: bold;">-</p> <p>Poor chemical resistance</p> <p>Not suitable for continuous exposure to media. Immediate damage may occur (e.g. loss of mechanical strength, deformation, discolouration, cracking, liquification).</p>

* Mind the chemical and temperature suitability!

** Caution necessary when used in a microwave oven: Heating can release amounts of melamine and formaldehyde that can be harmful to health!

Cleaning and maintenance of plastics

All polyolefins, such as PE-LD, PE-HD, PP and PMP, as well as the fluoroplastics PTFE, PFA, FEP and ETFE have water-repellent surfaces that are very durable and easy to clean. For cleaning, depending on the level of contamination, commercially available neutral or alkaline detergents can be used. Polycarbonate (PC) labware should not be cleaned with alkaline cleaning agents (> pH 7). Please note that no scrubbing agents or scouring pads should be used for labware made from plastics.

Cleaning with dishwashers

Labware made from the above-named plastics (except for PE-LD, due to the temperature limit) can be cleaned and dried in a laboratory dishwasher together with other apparatus. Machine cleaning with laboratory dishwashers is gentler to labware than cleaning in an immersion bath. The labware is exposed to the cleaning solution for relatively short rinsing periods when sprayed by the jet or injector nozzles. Due to their light weight, we recommend securing the apparatus to be washed with washing nets to prevent them from tumbling in the water jet. Labware is better protected against scratching when the wire baskets in the washing machine are plastic coated.

Cleaning in an ultrasonic bath

Plastic labware may be cleaned in an ultrasonic bath. However, direct contact with the acoustic membrane should be avoided.

Cleaning in trace analysis

To avoid contamination with cations and anions in trace analysis, plastic labware should be allowed to stand with a 1N HCl or HNO₃ solution for a maximum of 6 hours at room temperature, and be rinsed afterwards with purified distilled water. For trace analysis conducted in the concentration range of ng/g (ppb) or pg/g (ppt), containers made of the fluoroplastic PFA are particularly suitable, because they have a smooth surface, are easy to clean without carry-over (memory effects) and interaction with the container material.

Sterilisation of laboratory equipment made of plastics

Autoclaving

Recommended autoclaving protocol

20 minutes at 121 °C (2 bar),
according to DIN EN 285

Autoclaving (steam sterilisation) is defined as the destruction or irreversible inactivation of all reproducible microorganisms under exposure to "saturated steam at a minimum of 120 °C." (DIN 58946-1, 1987). DIN EN 285 specifies a minimum exposure time (t_g) of 20 minutes (killing time and safety margin) at a sterilisation temperature of 121 °C. For the correct sterilisation procedure, including biological safety (DIN EN 285), please contact your hygiene specialist.

Prior to autoclaving plastic labware, ensure that no soiling or residual contamination remains on the equipment. Otherwise, the residual contamination will bake on solidly during the autoclaving process. Even substances that have no effect on the plastic at room temperature can still lead to destruction of the plastic during the autoclaving process. Additionally, microorganisms might not be killed effectively if they are protected by the residual contamination.

Notes on autoclaving

- Containers with screw tops or stoppers must be **open** during autoclaving to allow for pressure equalisation
 - ➔ Autoclaving of a closed container will lead to the deformation or destruction of the container
- Plastic labware should be **stood upright on a level surface** during autoclaving to avoid shape deformation.
 - ➔ Plastic labware should not be laid on its side during autoclaving
- **No mechanical stresses** should be present during autoclaving
 - ➔ For example, do not stack items
- Do not autoclave any container that contains residual contamination or even rinsing agent
- Not all plastics are resistant to steam sterilisation! For example, polycarbonate loses its tensile strength
 - ➔ Mind the temperature limits for the plastics
 - ➔ Autoclavable products are identified with a "121 °C" symbol in this catalogue

The surfaces of some plastics can be attacked by chemicals present during autoclaving, which can cause persistent clouding. Some transparent plastics can absorb minute quantities of steam, which can lead to reversible clouding. This clouding disappears upon drying, which can be accelerated through the use of a drying oven.

Note!

For gas sterilisation, dry heat, and prior to heating in a microwave oven, all closures and stoppers must be removed as well.

Heating plastics in microwave ovens

Many plastics are suitable for use in microwave ovens. More accurate information can be obtained from the Table "Physical Properties of Plastics" on page 146. In this connection, it is important to be mindful of the chemical and temperature stability of the various plastics, and to ascertain whether the particular article and its contents are compatible with the given temperature. When aggressive acids, alkalis, or solvents are to be heated, the use of fluoroplastics is recommended. It is very important to provide for adequate ventilation (e.g., fume hoods).

Prior to the use of plastic labware in a microwave oven, the closures and stoppers must be removed from the apparatus.

Sterilisation* of plastics

Plastics	Autoclave 121 °C, t _e 20 min according to DIN	Heated air 160 °C (dry)	Gas (Ethylene oxide)	Chemical (Formalin, ethanol)	β-/γ-radiation 25 kGy

* Before sterilisation, labware must be carefully cleaned and rinsed with distilled water. Always remove covers from containers!

¹⁾ Frequent autoclaving may reduce mechanical stability!

Suitability of plastics for foodstuffs

The marked products comply with the lawful regulations of the German Consumer Goods Ordinance and/or Directives (EC) No. 1935/2004, (EC) No. 975/2009 and (EU) No. 10/2011 as amended.

In the testing for compliance with the threshold values for the global migration (or respectively, the specific migration threshold values), no determinations exceeded the allowed values. In addition, sensory testing found no olfactory and flavour-related impairments. The testing was implemented according to the 82/711/EEC and 85/572/EEC Guidelines by an independent, accredited institute.

All source materials used in the manufacturing of the products are listed in the German Consumer Goods Ordinance as at 20.12.2006, or respectively, Directive (EU) 10/2011, in accordance with the present attestation. Therefore, they represent permissible source materials in accordance with food law and may be used in the production of food commodities in accordance with the specified restrictions concerning migration threshold values and permissible residual content in the end product.

Marked PP products are suitable for contact with all foodstuff categories providing that a contact period of 24 hours and a contact temperature of 40 °C are not exceeded. Marked SAN products are suitable for contact with all aqueous, alcoholic and fatty foods, providing that a contact period of 24 hours and a contact temperature of 40 °C are not exceeded.

Disposal and Recycling of Plastics

If the disposal of a piece of plastic labware is unavoidable, regional laws and regulations must be observed. Recycling centres can be found in many cities, which are designed for the disposal of recyclable materials. To simplify the task of sorting in these recycling centres, the majority of labware from VITLAB can be easily identified and presorted by using the engraved or imprinted recycling code. Prior to disposal, plastic labware must be cleaned, and sterilised if necessary, according to the currently valid regulations.

To simplify the separation of plastics for recycling, so that these can later be reused as raw material for manufacture, plastic identification labels (number 01-07) have been introduced. This identification scheme was published in 1988 under the title "SPI resin identification coding system" by the Society of the Plastics Industry (SPI). For coding, the commonly used shorthand for plastics according to the DIN 7728 is also used.

SPI number 07 stands for "other". This is used to indicate other plastics such as PMP, PFA, PTFE etc. VITLAB doesn't use the "0"; rather, it identifies the specific raw material with the abbreviation according to DIN 7728 to simplify identification of the plastic for the end user.

CE mark / CE-IVD Guidelines

IVD Guidelines of the EU

On 7 December, 1998, the EU "Guidelines for In Vitro Diagnostic Devices" (IVD Guidelines) were published in the Official Journal of the European Communities, and thus came into force. The Guidelines were transposed into German National Law on 1 January, 2002, as a corresponding modification of the German Medical Devices Act (MPG). Consequently, in vitro diagnostic devices are considered medical devices.

Definition: Medical devices*

Medical devices are all instruments, apparatus, devices, materials, or other objects including software that are intended by the manufacturer for use in humans:

- for the purpose of detection, prevention, monitoring, treatment, alleviation or compensation of diseases, injuries or disabilities;
- for the purpose of investigation, replacement or modification of the anatomy or of a physiological process;
- for the purpose of control of conception. Pharmacologically or immunologically active agents are excluded, as these are regulated by the German Pharmaceuticals Law.

Definition: In vitro Diagnostic Devices (IVD)*

"In vitro diagnostic devices" are medical devices that are used for in vitro investigations of samples derived from the human body, including donated blood and tissue. Included are reagents, calibration substances or devices, control substances or devices, equipment, instruments, apparatus, systems, or also sample containers, if they are specifically intended by the manufacturer for use in medical tests. "In vitro diagnostic devices" serve mainly to provide information on:

- physiological or pathological conditions;
- congenital anomalies;
- monitoring of therapeutic measures.

CE Mark

With the CE mark on a product, the manufacturer affirms that the product complies with the requirements for products of that type established by the EU Guidelines and, as necessary, has undergone the required testing. The manufacturer applies this mark to the product and additionally produces a Conformity Declaration that certifies the conformity of the product with the cited guidelines and standards.

The medical products supplied by VITLAB are all included in the class of in vitro diagnostic (IVD) devices.

This includes, for example:

- VITLAB® micropipettes
- Pipette tips
- Urine bottles
- Microtubes

* See the definitions according to MPG § 3 (Definition of Terms)

Accuracy

What do “tolerance, accuracy, coefficient of variation, and precision” mean in volumetric measurements?

Graphic illustration of precision and accuracy

The dart board simulates the volume range around the centred nominal value, the white dots simulate the different measured values of a specified volume.

Good accuracy: All hits are near the centre, i.e., the nominal value.

Good precision: All hits are close together.

Result: The manufacturing process is well controlled by an accompanying quality assurance program. Minimal systematic deviations and a narrow variance in products. The permissible limits are not exceeded. There are no rejects.

Good accuracy: On average, the hits are evenly distributed around the centre.

Poor precision: No substantial errors, but hits widely scattered.

Result: All deviations are “equally probable”. Instruments exceeding the permissible tolerance should be rejected.

Poor accuracy: Although all hits are close together, the centre (nominal value) is still missed.

Good precision: All hits are close together.

Result: Improperly controlled production, with systematic deviation. Instruments exceeding the permissible tolerance should be rejected.

Poor accuracy: The hits are far removed from the centre.

Poor precision: The hits are widely scattered.

Result: These volumetric instruments are of inferior quality.

Calculation formulae

The accuracy of glass volumetric instruments is commonly defined by “Tolerance Limits”, whereas for liquid handling instruments the statistical terms “Accuracy [%]” and “Coefficient of Variation [%]” have been established.

Tolerance

The term “tolerance” (tol.) in the corresponding standards defines the maximum permissible deviation from the nominal value.

$$\text{Tol.} \geq |V_{\text{meas.}} - V_{\text{nom.}}|$$

Accuracy

Accuracy (A) indicates the closeness of measured mean volume to the nominal value, i.e., systematic measurement deviation. Accuracy is defined as the difference between the measured mean volume (\bar{V}) and the nominal value ($V_{\text{nom.}}$), related to the nominal value in percent.

$$A[\%] = \frac{\bar{V} - V_{\text{nom.}}}{V_{\text{nom.}}} \cdot 100$$

Coefficient of Variation

The coefficient of variation (CV) indicates the closeness of values from repeated measurements, i.e., random measurement deviation. The coefficient of variation is defined as standard deviation in percent, related to the mean volume.

$$CV[\%] = \frac{s \cdot 100}{\bar{V}}$$

Partial volumes

(analogous to $CV_{\text{part.}} \%$)

Generally, A and CV are based on

the nominal volume ($V_{\text{nom.}}$). These data in percent must be converted to partial volumes ($V_{\text{part.}}$). By contrast, there is no conversion for partial volumes if A and CV are stated in volume units (e.g. ml).

$$A_{\text{part.}}[\%] = \frac{V_{\text{nom.}}}{V_{\text{part.}}} \cdot A_{\text{nom.}}\%$$

Tolerance from A and CV

To a good approximation, the tolerance, e.g. for the nominal volume ($V_{\text{nom.}}$), can be calculated from the accuracy and coefficient of variation.

$$\text{Tol.} \geq \frac{|A\%| + 2CV\%}{100\%} \cdot V_{\text{nom.}}$$

Precision

If the variance in the individual measurement results about the mean volume \bar{V} is given in units of volume, this relates to precision.

Alpha - Index

2-way connector, PE-HD 119

A

Accessories for VITLAB[®] pipeo[®] & maneus[®] 50
Accessories for VITLAB[®] microlitre pipettes 25
Adapter for VITLAB[®] continuous E/RS 31
Adapter for VITLAB[®] genius and simplex 14
Adapter for VITLAB[®] piccolo 20
Adapter for VITLAB[®] TA 19
Analytical funnels, PP 87
Autosampler-vials, PFA 98

B

Beakers 56 - 58, 76 - 80
Bottle-top burette VITLAB[®] continuous 30
Bottle-top dispenser VITLAB[®] genius 12
Bottle-top dispenser VITLAB[®] piccolo 20
Bottle-top dispenser VITLAB[®] simplex 12
Bottle-top dispenser VITLAB[®] TA 17
Bottles 66 - 73, 104 - 113
Bottles for VITLAB[®] continuous E/RS 31
Bottles for VITLAB[®] genius and simplex 13
Bowl, PP, with lid 115
Bowls, PP 116
Büchner funnels, PP 87
Bucket with spout, PP 59
Buckets, PE-HD 59
Bulb pipettes, PP, Class B 47
Burette clamps, PP 33
Burette stopcocks, PMP/PTFE 33
Burette VITLAB[®] continuous 30
Burettes, borosilicate glass 3.3 32
Burettes, VITLAB[®] Dr. Schilling 32

C

Cans 95 - 98
Caps with dropper inserts, PE-HD 73
Catchment trays, PP 116
Chemical waste disposal system, PE/PP 114
Collectors, PP or SAN 58
Coloured wash-bottles, PE-LD/PP 71
Connectors 118, 119
Connectors, straight, PP 118
Connectors, T-shape, PP 119
Connectors, universal PP 118
Connectors, Y-shape, PP 119
Container, PP 114
Coplín staining chamber, PP 102

D

Desiccator plates, PP and porcelain 94
Desiccators with stopcock, PC 93
Desiccators with stopcock, PP/PC 93
Desiccators, PP/PC 93
Discharge tube for VITLAB[®] genius and simplex 14, 15
Discharge valves for VITLAB[®] genius and simplex 16
Dishes 80, 116, 122
Dishes, PVC 116
Dispenser VITLAB[®] genius 12
Dispenser VITLAB[®] piccolo 20
Dispenser VITLAB[®] simplex 12
Dispenser VITLAB[®] TA 17
Dispensing cartridge for VITLAB[®] TA 18
Disposable pipettes, PS 48
Double spatula 62
Drawer organisers, PVC 123
Dropping bottles, PE-LD 73
Dropping bottles, PE-LD/PE-HD 73
Dropping pipettes 74
Drying racks 124
Drying tube for VITLAB[®] continuous E/RS 31
Drying tube for VITLAB[®] genius and simplex 14

E

Erlenmeyer flasks 81
Evaporating dishes, PFA 90

F

Filling tubes for VITLAB[®] genius and simplex 15
Filtering rack 89
Forceps 62

General Terms and Conditions of VITLAB GmbH

1. General

- 1.1 These General Terms and Conditions (GT&C) are intended for use in commercial transactions between businesses.
- 1.2 These GT&C shall apply for all, including future, contracts with the customer. Other terms and conditions shall not become part of the contract, even if we do not expressly object to them. Subsidiary agreements made before or at the time of conclusion of contract may only be invoked if they are immediately confirmed in writing. The waiver of the requirement for written form shall only be possible in writing. The language of the contract shall be German or English. In the event of a discrepancy between the German language version of these GT&C and a version in any language, the German language version shall prevail.
- 1.3 Our offers are subject to change and non-binding. We reserve the right to make technical improvements to our products.
- 1.4 We may store and process data in our IT system necessary for the purpose of processing the contract.
- 1.5 A set-off by the customer shall not be permitted unless the counterclaims are undisputed or legally established, or pecuniary counterclaims arising from the right to refuse payment pursuant to Section 320 Bürgerliches Gesetzbuch (BGB) (German Civil Code).
- 1.6 Orders with a goods value of below € 250 shall be subject to a minimum order surcharge of € 50. Delivery shall be undertaken generally in packaging units (PU) according to the currently valid price list. For deliveries within five (5) working days or for order values up to € 500, we reserve the right to waive an order confirmation.
- 1.7 The place of jurisdiction shall be the court responsible for our head office in Aschaffenburg, Germany. We shall also be entitled to appeal to the court responsible for the head office of our customer. We shall, furthermore, as plaintiffs have the right to invoke the Arbitration Court at the Chamber of Commerce and Industry in Frankfurt am Main, Germany. The Arbitration Court shall, in this case, make the final judgment in accordance with the Rules of Arbitration of the Chamber of Commerce and Industry in Frankfurt am Main without recourse to the ordinary courts of law. The instigation of legal dunning proceedings by us shall not signify the exertion of our right of choice; it shall be admissible in all cases.
- 1.8 German law shall apply exclusively under the exclusion of the conflict of laws principles of Private International Law and the UN Convention on Contracts for International the Sale of Goods (CISG).

2. Delivery

- 2.1 The place of performance shall be our factory in Grossostheim, Germany. The risk shall transfer to the customer when the delivery leaves the ramp at our factory. This shall also apply to partial deliveries or where we have performed additional services, such as shipping; costs for transport, packaging or insurance; exportation and installation.
- 2.2 Insofar as we have agreed to orders on call, the customer must take delivery of the total amount within six (6) months, at the latest at the date confirmed by us.
- 2.3 In the case of a delay in the customer's acceptance of a delivery, we may, without prejudicing our claim for performance, have the goods put into storage at the cost of the customer or, after providing a warning and setting a deadline for the customer, otherwise dispose of them.

3. Delivery Period, Delay

- 3.1 Delivery times shall be ex works. Delivery periods shall begin on receipt of our order confirmation by the customer; however only after settlement of any technical issues pending from the conclusion of the contract; and after receipt of any documents to be provided to us by the customer, such as drawings, permits or approvals; and definitely not before receipt of agreed advance payments. The delivery period shall be considered to have been met if readiness for dispatch has been notified before the expiry of this period. Delivery shall be subject to us receiving our own supplies punctually and in good order.
- 3.2 Force Majeure and circumstances beyond our control, such as strikes, lock-outs, operational disruption, shortages of raw materials and equipment, delayed delivery or non-delivery by our suppliers, shall extend the delivery periods accordingly and shall release us from our delivery obligations if they, as a result, render delivery impossible. We shall also not be liable for the circumstances described above if they arise during an already existing delay. The same shall apply for any additional or amended services requested by the customer.
- 3.3 We shall be considered to be in default of delivery only if the customer has issued us with a reminder, has set a reasonable extension period which has elapsed.
- 3.4 In the case of delay damages, our liability for compensation shall be limited to 10% of the value of the delayed delivery/service. The limitation shall not apply in cases of wilful intent, gross negligence and/or injury to life, limb or health. The customer shall be obliged to immediately inform us in writing of any likely consequences of delay.

4. Prices, Terms of Payment

- 4.1 Prices shall be ex works and exclusive of statutory VAT, if applicable. Costs of packaging, transportation, freight and insurance shall be borne by the customer. Prices shall also be exclusive of the cost of returning and recycling/disposing of old equipment.
- 4.2 Invoices shall be payable to our account in EUROs (€) without deductions and free of charges and expenses. Payment shall be made immediately or by the date stated. The determinant factor shall be the receipt of payment. Cheques and bills of exchange shall only be accepted on account of performance and at the cost of the customer.
- 4.3 In the case of customers, with whom we are working for the first time or with whom we do not work regularly, after delay in payment or in the case of reasonable doubt as to the creditworthiness of the customer, we shall reserve the right to make individual deliveries dependent on their prepayment or a security deposit to the value of the invoice amount.
- 4.4 Should the period between conclusion of contract and agreed delivery exceed four (4) months, so may we, at our discretion, demand a reasonable additional charge equivalent to the increase in our costs up until delivery. For deliveries on call, our current price shall apply.
- 4.5 In the case of an agreed return of goods that are free of defects, the customer shall be charged a checking and processing fee of 20 % of the invoice amount (minimum € 50).
- 4.6 Should the customer be in arrears with payment, our debt claims against him shall be due immediately, and we shall not be obliged to make any further deliveries based on current delivery contracts.
- 4.7 If payment is delayed, we shall charge - notwithstanding further damage compensation claims - interest on arrears at the statutory rate.
- 4.8 We may offset amounts payable to the customer (e.g. from credit notes) against our claims against the customer.

5. Retention of Title, Assignment of Future Claims

- 5.1 The goods delivered shall remain our property until the complete and unlimited payment. Should we still have further claims against the customer, we shall then retain our property rights until payment of these has been effected.
- 5.2 The customer may neither use goods subject to retention of title nor combine them with other objects to which a third party may have rights. Should, however, goods subject to retention of title become, through their combination with other objects, part of a new (complete) item, we shall be a proportional co-owner of this new item directly, even if this latter component is regarded as the main component. Our proportion of co-ownership shall be determined by the ratio of the invoice value of the goods to the value of the new item at the time of combination.
- 5.3 The customer may resell goods subject to retention of title in the course of his normal business as long as he has not assigned, pledged or otherwise encumbered his claims from the resale.
- 5.4 The customer shall assign to us in advance as collateral any claims against his customers from the resale of the goods subject to retention of title (see Clause 5.3) and/or newly formed items (see Clause 5.2) to the value of our invoice for the goods subject to retention of title. As long as the customer is not in default of payment for the goods subject to retention of title, he may collect the assigned claims in the ordinary course of business. He may, however, only use the proportional proceeds for the payment to us for the goods subject to retention of title.
- 5.5 At the customer's request, we shall release collateral at our discretion if and to the extent that the nominal value of the collateral exceeds 120% of the nominal value of our outstanding debt claims against the customer.
- 5.6 The customer shall be required to inform us immediately of any attachments, seizures or any other third-party dispositions relating to the goods that are reserved or co-owned by us.

- 5.7 In the event of failure to pay bills of exchange or cheques, or failure or recall of a payment made by debit order/direct debit mandate, suspension of payments or insolvency of the customer or of the end buyer, the rights of the customer under Clause 5.3 shall no longer be valid. The customer must then immediately inform the buyer of our extended retention of title; he may use the assignment of relevant proportional proceeds only to pay for the delivered goods.
- 5.8 Where payment is delayed and in the cases covered in Clause 5.7, we shall be entitled to withdraw from the contract and/or, without withdrawing from the contract, demand the return of any goods subject to retention of title still in possession of the customer and to collect the assigned receivables ourselves. In order to ascertain our rights, we shall be entitled to have all of our customer's documents/books concerning our reserved rights examined by a person who is subject to the professional duty of confidentiality.

6. Warranty, Limitation of Liability

- 6.1 We warrant that our delivered goods (including any agreed installation) are free of defects at time of risk transfer. The required quality, durability and use of our delivered goods are based solely on the agreed written specification, product description and/or operating manuals. Any information beyond this, in particular in preliminary discussions, advertising and/or referencing industrial standards shall only become part of the contract if they are expressly referenced in writing.
- 6.2 Should the customer requires the delivered goods for purposes other than those agreed, he must take responsibility himself for examining their special suitability for this - also in terms of product safety - and ensure their compliance with all relevant technical, legal or regulatory provisions before the intended use. We shall not be liable for any usability that was not expressly confirmed by us in writing. In the case of material or design requirements of the customer, we shall accept no liability for the suitability or permissibility of the desired materials or designs, and shall, in this respect, have no particular testing obligation. Compliance with safety-related and occupational health regulations depends on the location and operating conditions of which we have no prior knowledge. Action for ensuring compliance shall therefore be the responsibility of the customer or his buyer.
- 6.3 We shall not be liable for the consequences of improper handling, use, maintenance and operation of the delivered goods; the consequences of normal wear and tear, in particular of wearing parts, such as pistons, seals, valves; the breakage of glass, plastic or ceramic parts; for the consequences of chemical, electrochemical or electrical influences; or non-observance of the operating instructions.
- 6.4 If a notice of defect is justified, we shall initially only be required to provide supplementary performance. Supplementary performance shall be, at our discretion, either rectification of the defect or delivery of goods free of defects. Further warranty claims shall only apply in the event of rejection, impossibility or failure of the supplementary performance. The customer shall bear additional expenses, which arise from the fact that the goods were taken after delivery to a location other than the agreed place of performance.
- 6.5 The customer must, immediately upon receipt of the goods, inspect them carefully, also in terms of product safety, and notify obvious defects immediately in writing; any hidden defects must be immediately notified upon discovery. The customer must notify the carrier immediately of any transport damage. Failure to observe the testing and notification obligation shall void any customer claims for defects.
- 6.6 Our liability for slight negligence shall be limited to claims for injury to life, limb or health, to claims under the Produkthaftungsgesetz (German Product Liability Act) or to claims of culpable breach of fundamental contractual obligations through which the purpose of the contract is endangered. Otherwise, our liability for slightly negligent breach of fundamental contractual obligations is limited to the typically occurring damages which we could have foreseen when the contract was concluded.
- 6.7 Should the customer use the delivered goods in conjunction with environmentally harmful, toxic, radioactive or otherwise hazardous materials, he shall be obliged to clean them before returning them to us. If applicable, we may charge any necessary costs for decontamination/cleaning and disposal to the customer's account.

7. Limitation Period

The warranty period shall be one year and starts from the date of delivery of the goods to the customer. The same shall apply for claims for damages, irrespective of their legal basis. The limitation periods of Section 438 Para. 1 Nos. 1 and 2, Section 479 Para. 1 and Section 634a Para. 1 No. 2 of the BGB (German Civil Code) shall remain unaffected. The restriction of the limitation period shall not apply to claims based on fraudulent concealment of a defect, for claims under the Produkthaftungsgesetz (German Product Liability Act) or for damages resulting from injury to life, limb or health and other damages based on intent or gross negligence. The limitation period in respect of replaced or repaired goods shall not commence anew.

8. Software Use

- 8.1 If software is included in the scope of a delivery, the customer shall be granted a non-exclusive right to use the software and its associated documentation. It is provided for use on the designated delivery item. The use of the software on more than one system shall be prohibited.
- 8.2 The customer shall only be entitled to copy, transfer or translate the software or to convert it from object code to source code to the extent permitted by law (Sections 69a et seq. Urheberrechtsgesetz - German Copyright Act). The customer undertakes to refrain from removing manufacturer information, in particular copyright notices, or from changing these without our prior express consent or the prior express consent of the software supplier.
- 8.3 All other rights to the software and the documentation including copies thereof shall remain with us and/or the software supplier. The issue of sub-licences is not permitted.

9. Installation

- 9.1 Installation costs may be invoiced on a monthly basis. Fixed installation prices shall only cover the work that has been agreed upon. In other cases our current price list for installation and service costs shall apply.
- 9.2 The customer shall be responsible for providing the following at his own expense: lighting, motive power, if necessary, compressed air, water, electrical power for welding and heating, including the necessary connections; electrical installations to connect the products supplied by us; the devices required (such as lifting equipment); a lockable room that can be used for storing materials; tools and clothing during the installation.

10. Spare Parts, Maintenance/Repair and Calibration

- 10.1 For spare parts and maintenance, repair and calibration services, the current repair and exchange price list shall apply.
- 10.2 Insofar as there is an obligation on our part to maintain/supply spare parts, then this obligation shall be limited to a period of five (5) years from the date of delivery. If spare parts are not manufactured by us, or are no longer available on the market, for example electronic components, or if the raw material for their production is no longer available, our obligation to deliver spare parts shall lapse.
- 10.3 For calibration and maintenance, expendable items from VITLAB production are normally used.
- 10.4 Maintenance and calibration services can only be provided if the customer has declared the devices sent to be safe to work on from a health hazard perspective.
- 10.5 For repair/service values of up to € 50, we reserve the right not to provide a separate cost estimate.

11. Legal Reservation, Industrial Property Rights, Confidentiality

- 11.1 We reserve ownership and all industrial property rights and copyrights to all moulds, tools or other devices, samples, pictures, and business and technical documents produced or provided by us. This also applies where the customer has wholly or in part taken on the costs hereof. The customer may use these only in the manner agreed with us. Without our written consent, he may not himself manufacture contractual objects delivered or have the same manufactured by third parties.
- 11.2 Insofar as we deliver goods according to the designs or other requirements specified by the customer (models, patterns etc.), the customer shall be liable to us by default for ensuring that, through the manufacture and delivery of these goods, the industrial property rights or other rights of third parties are not infringed. If the customer is at fault he shall reimburse us all damage resulting from any such infringement of rights.
- 11.3 Any information acquired from this business relationship and not deemed to be public knowledge must not be disclosed by the customer to third parties.
